RE: Site Inspection, Yankee Mine, S/049/022, Utah County, Utah

Date of Inspection: November 5, 1993
Time of Inspection: 1625 - 1700
Conditions: Cold, lightly snowing
Participants: Tony Gallegos, Travis Jones, DOGM

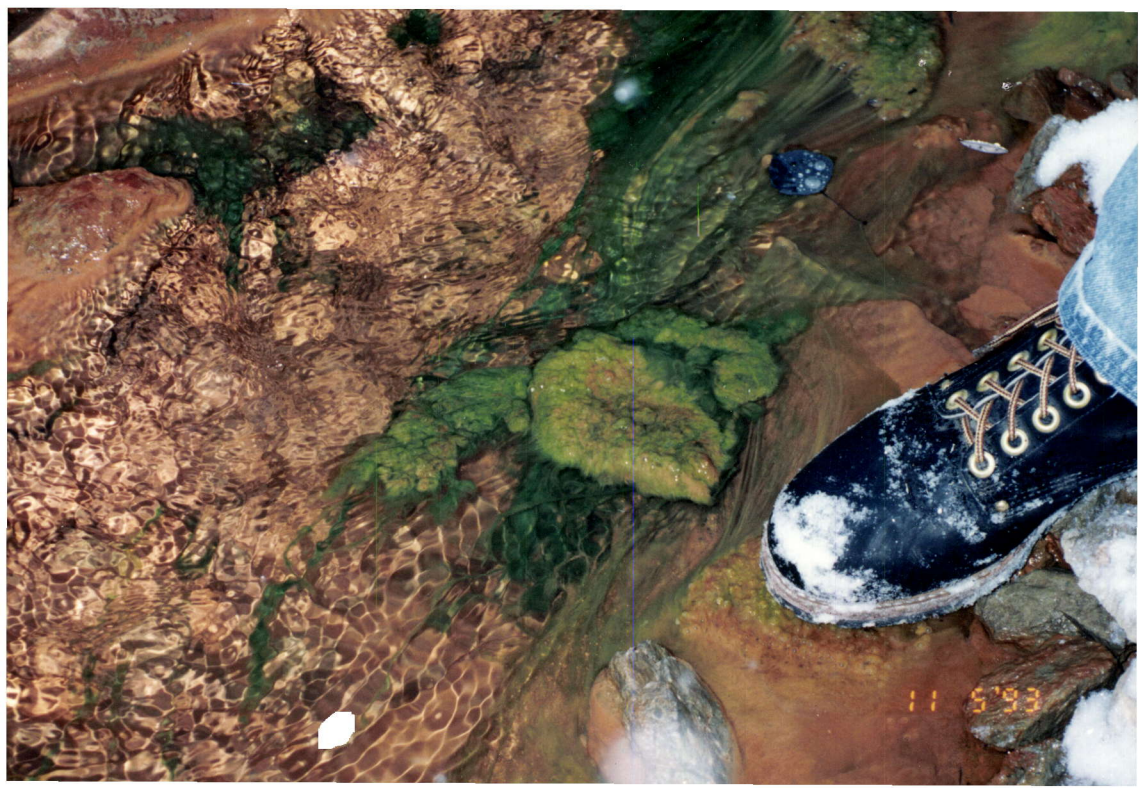

Purpose of Inspection: To examine the site disturbances and become familiar with the site

A light cover of snow was on the ground upon our arrival. This snow cover in combination with additional snow falling did not allow us to spend much time at the site. The road into the site is not an all weather road and was already becoming slick in spots.

We examined what we believed was the project area. The snow cover made it difficult to discern which disturbances were associated with this project. A stream of water from a collapsed portal was running through rust colored sediments. The water has some green moss-like vegetation growing in it. The stream then flows over mine waste dump material before joining another stream. Photos were taken of the areas visited.
